Cryptocurrency arbitrage uses the same principle of arbitrage from traditional markets. Usually, this practice can be made using two different crypto exchanges that have different prices. To make the crypto arbitrage profitable, you need to buy crypto assets at a lower price and then sell them at a higher price on other exchanges.

This API lets brokers build a bridge to connect their backend systems to the TradingView interface, so that
broker partners then can be supported on the TradingView Web Platform. The integration is very
straightforward. The broker builds a REST Web API on its own servers based on our specification so that it
can be connected to TradingView. TradingView provides a sandbox and required technical assistance to get
your TradingView Web Platform integration started.

Controlling shares of the token have been burned meaning that no one can retrieve the initial liquidity provided to PancakeSwap to enable trading, and no one can make any alterations to the smart contract. That makes Saturna unruggable as there is no mint function to change the supply or alter the current tokenomics.
