Automated market makers (AMM) are protocols that provide liquidity to specific markets through automated algorithmic trading. In the context of decentralized cryptocurrency exchanges, automated market makers represent smart contracts that create so-called liquidity pools of tokens, which are automatically traded by an algorithm rather than an order book.

Automated market makers (AMMs) are part of the decentralized finance (DeFi) ecosystem. They allow digital assets to be traded in a permissionless and automatic way by using liquidity pools rather than a traditional market of buyers and sellers. AMM users supply liquidity pools with crypto tokens, whose prices are determined by a constant mathematical formula.

To sum up, automated market makers have increased the liquidity of decentralized exchanges, as well as a new profitable money-making option for liquidity providers. Being the very core of DeFi, AMMs have become one of the most important innovations of the decentralized world.
