A private key is like a password a string of letters and numbers that allows you to access and manage your crypto funds. When you first buy cryptocurrency, you are issued two keys: a public key, which works like an email address (meaning you can safely share it with others, allowing you to send or receive funds), and a private key, which is typically a string of letters and numbers (and which is not to be shared with anyone).

Bitrue offers a wide range of coins for purchase. Users can also sell their altcoins on the exchange and withdraw to fiat currency or other cryptocurrencies. With no registration necessary, Bitrue is simple and convenient to use with low fees.

Polkadot, like many post-Bitcoin cryptocurrencies, is both a token that can be bought or sold via exchanges like Coinbase and a decentralized protocol. The Polkadot protocol is designed to allow unrelated blockchains to securely talk to each other, so that value or data can flow between, say, the Ethereum and Bitcoin blockchains without any intermediary.
