The swap and liquify basically sells a portion of SafeMoon supply and buys BUSD/BnB for the Liquidity pools. Why? Well to keep the price stable, you need liquidity ! Now imagine we get some volume moving, the swap and liquify triggers a bit more. I believe its every 500,000,000 coins that it triggers (edited this.)

The countrys central bank will provide its currency to another country's central bank in whats called a liquidity swap. The lending central bank uses its liquid state currency to buy the liquid state currency of another borrowing central bank at the market exchange rate. The lender then agrees to sell the borrower's currency back at a rate that also includes any interest accrued up to that point on the loan.

What is Liquid Swap? Liquid Swap is a liquidity pool developed based on the AMM (Automatic Market Maker) principle. It consists of different liquidity pools, and each liquidity pool contains two digital tokens or fiat assets. You can provide liquidity in the pools to become a liquidity provider and earn transaction fees and flexible interest.
