It is the sovereign currency in an electronic form and it would appear as a liability (currency in circulation) on a central banks balance sheet. The underlying technology, form, and use of a CBDC can be molded for specific requirements.

It does have higher probability of going up than down because of the good use case, well-designed tokenomics, active community and a solid team behind it. How much will DODO be worth? For the short-term future, it could reach \$1.08.
