KIN has one major advantage over all other cryptocurrency projects: its parent company KIK has a huge active user group already in place, which is a huge plus for the coin in terms of usage. There are several social media blockchain startups, but none of them have large user bases, or even a working product at this time.

The KIN coin was released through the Ethereum blockchain. It was created to be the core currency in the ecosystem of Kik Messenger. KIN is an abbreviation for Kinship, and the aim was to reinforce bonds among the members of the Kik community. Its 2017 ICO raised close to \$100 million.
