This is the coin you can use on the IOTX network for staking and transactions. Coinbase/pro list the erc20 version of the coin (old version). If you plan on transferring to iopay or using within IOTX network, you will have to pay fees to swap erc20 into native because erc20 does not work on the IOTX network.

Cosmos (ATOM) Cosmos (ATOM) markets itself as an alternative to traditional blockchain networks

designed to offer faster speeds, low costs, and scalability. It is one of the most highly rated blockchain projects this year and its native token ATOM is also surging. At the time of writing, ATOM was selling for \$39.94, up nearly 8% in 24 hours.

Based on everything that has been highlighted so far, HitBTC is a solid and established exchange that can be used to access super low trading fees, as well as an unparalleled trading engine and API. The exchange is best suited for advanced users, but beginners can also get the hang of it in due time.

Notably, Coinbase Pro is only accepting the ERC-20 version of IOTX, and not mainnet IOTX. Users shouldn't be sending their native IOTX to the exchange, as the coins will be lost. IOTX plays a number of roles on the IoTeX blockchain, and is used to facilitate transactions (gas fees), staking, governance, and registering new devices on the network.
