A node, in the world of digital currency, is a computer that connects to a cryptocurrency network. The node or computer supports the network. It supports it through validation and relaying transactions. At the same time, it also gets a copy of the full blockchain. Any computer that connects to the Bitcoin network, for example, is a node.

A node is simply a computer that connects to a cryptocurrency's blockchain network. It can be used to process transactions, store data about those transactions, and keep track of other nodes on the network. Nodes are essential to supporting the cryptocurrency network, and without them, the system would not be able to function.
