What is a node in a cryptocurrency network? Examples - Market.

API Keys: Coinbase Pro - Automated Trading at Alertatron

Each cryptocurrency has its network with a set of nodes communicating with each other to verify blocks. Bitcoin, for instance, has a bitcoin network and a set of nodes that communicate with each other randomly. Each node has the authority to verify and validate all Bitcoin transactions and validate every block.

A node is simply a computer that connects to a cryptocurrencys blockchain network. It can be used to process transactions, store data about those transactions, and keep track of other nodes on the network. Nodes are essential to supporting the cryptocurrency network, and without them, the system would not be able to function.
