New ANTCOINs are generated by a competitive and decentralized process called "mining". This

process involves that individuals are rewarded by the network for their services. ANTCOIN miners are

processing transactions and securing the network using specialized hardware and are collecting new

ANTCOINs in exchange.

Solana aims to improve blockchain scalability by using a combination of proof of stake consensus and

so-called proof of history. As a result, Solana claims to be able to support 50,000 transactions per second

without sacrificing decentralization. SOL is not yet available on Coinbase.com or via our Consumer mobile

apps. We will make a separate announcement if and when this support is added.
