Coinbase has been hit-and-miss for me for the past month. For example I've had: 1 "instant transfer/buy" that took 23 hours for the coins to arrive. The next day, before my original purchase arrived I needed to make a small additional order to compensate for a rate drop and that one went through right away.

Usually the delay is under an hour, and the transaction will eventually go through normally. Occasionally, transactions are not accepted by the rest of the network and therefore are never considered to be "confirmed". Common causes of unconfirmed transactions Sending a very small amount with insufficient fees

eToro allows users to begin trading cryptocurrency for as little as \$50, and its innovative trading platform lets investors mirror select traders with successful track records move-by-move.
