Binance Liquid Swap is the name of Binances DEX (Decentralized Exchange). Its a regular-looking DeFi token swapping facility with liquidity pool staking. Its supposed to be DeFi, but it runs on top of the Binance infrastructure, so in the end, its a hybrid DeFi/CeFi platform.

The countrys central bank will provide its currency to another country's central bank in whats called a liquidity swap. The lending central bank uses its liquid state currency to buy the liquid state currency of another borrowing central bank at the market exchange rate. The lender then agrees to sell the borrower's currency back at a rate that also includes any interest accrued up to that point on the loan.

Candlesticks give you an instant snapshot of whether a markets price movement was positive or negative, and to what degree. The timeframe represented in a candlestick can vary widely. Coinbase Pro, for instance, defaults to six hours with each candle representing a five-minute slice but users can set it to be longer or shorter.
