An API Key can be considered as a username. This is generated by the exchange once you declare your settings. An API Secret or API Private Key is simply another string of characters that must be used in

combination with the API Key to establish the connection. An additional security layer can be added by generating an API Passphrase. While the API Key and Secret are generated by the exchange, the Passphrase is commonly generated by the user.

The CB-ACCESS-SIGN header is generated by creating a sha256 HMAC using the secret key on the prehash string timestamp + method + requestPath + body (where + represents string concatenation). The timestamp value is the same as the CB-ACCESS-TIMESTAMP header. The body is the request body string. It is omitted if there is no request body (typically for GET requests).
